

Trainings PCB-Investigator

Our training program (**german/english**) is intended for all users of our software and also for interested parties, who would like to get acquainted with the possibilities of our software. **Irrespective of whether you start with PCB-Investigator or are already an "old stager" – you will surely find the right answer to your question in our training.**

Take advantage of our many training opportunities and make yourself or your employees fit for everyday practice with PCB-Investigator.

Whether you work in development, assembly or fabrication – benefit from the best system available for the development and analysis of printed circuit boards.

Our offers range from an initial training in our software to an intensive expert training – we offer you a multitude of options!

In order to serve every customer request, we offer **three different standard packages: basic, advanced and expert training.**

If you prefer an **in-house training** or you have a **special training request**, just contact us. We will certainly find an **individual solution for your needs!**
Price request to @info@easylogix.de.

We are looking forward to welcome you soon to one of your training courses!
